Education

Purdue University

Aug 2022 - May 2026 (Expected)

Ph.D. in Electrical and Computer Engineering, West Lafayette, IN, USA

GPA: 4.0 / 4.0

Indian Institute of Technology Kanpur

Jul 2017 - May 2022

B. Tech-M. Tech (Dual Degree) in Electrical Engineering, Kanpur, India

B. Tech GPA: 9.6/10.0, M. Tech GPA: 10.0/10.0

Professional Experience

Purdue University | Graduate Research Assistant

Aug 2022 - present

- Developed a testing framework to evaluate the goodness of fit of comparison data to a Bradley-Terry-Luce(BTL) model.
- Established the minimax optimality of the test and conducted evaluations on real-world datasets using Python.
- Evaluated how accurately real-world datasets, such as NFL matches, LMSYS LLM leaderboard, and preference datasets for LLM and RL reward models, etc, conform to an underlying BTL or a Thurstone model based on the hypothesis test.

Indian Institute of Technology Kanpur | Researcher (Master's Thesis)

Jan 2021 - Apr 2022

- Researched on weighted matrix completion and analyzed the impact of subspace information on the reconstruction error.
- Designed a weighted nuclear-norm minimization algorithm, provided its convergence analysis and Python simulations.
- Quantified performance gains in multi-user wireless networks, demonstrating a 20% increase in per-user data rate.

University of California Santa Cruz | Research Intern

May 2021 - Jul 2021

- Introduced two new architectures that achieve a 1000x reduction in storage costs and a 200x decrease in communication costs associated with blockchain's historical data and simultaneously provide the confidentiality of the stored data.
- Developed a construction of the secret sharing scheme satisfying the requirements of the protocol.

Indian Institute of Technology Kanpur | SURGE Research Fellow

May 2019 - Jul 2019

- Trained conditional generative models in *TensorFlow* to combat slowing down of MCMC algorithm near criticality.
- Used trained generative adversarial network models for unsupervised phase transition detection.
- Proposed a hybrid conditional GAN & MCMC algorithm adapting to distribution errors and improving accuracy by 10%.

Projects

Testing for Ranking Models | Python

• Developed a test to validate the common contextual BTL model assumptions in preference datasets used for LLM training with RLHF. The test justified using a mixture of reward models for RLHF as it better fits the preference data.

Movie Recommendation System | Python

• Designed and implemented a Python-based movie recommendation system using the Alternating Projection algorithm with IMDb Dataset to provide users with tailored movie suggestions based on their preferences.

IEEE Signal Processing Cup 2021 | MATLAB, Python

- Developed channel estimation techniques for frequency selective channels through Dictionary Learning.
- Optimized IRS configuration for maximizing spectral efficiency using gradient ascent and Newton's Algorithm.

BAJA SAE, IIT-K Motorsports | MATLAB, Solidworks

- Designed and implemented a multi-link suspension system for both the front and rear of an All-Terrain vehicle.
- Utilized MATLAB for kinematic analysis, optimization, and graphical insights into dynamic suspension parameters.

Technical Skills

Languages: Python, Java, C, C++, SQL, LATEX, MATLAB

Software's/Libraries: Git, TensorFlow, PyTorch, DSPy, Solidworks

Selected Publications

• Hypothesis Testing for the Generalized Thurstone model. Under review.

• On Doeblin Curves and Their Properties. Proceedings of IEEE ISIT 2024.

Awards

- 2022: Recipient of the Dr. Vijay K. Varma Talent Award, graduation award at IIT-Kanpur.
- 2021: Qualcomm Innovation Fellowship 2022, India.
- 2017-21: Academic Excellence Award, for 4 consecutive years at IIT-Kanpur,
- 2016: KVPY scholarship Awardee, India.
